

The CB Lake Dredge of 2022/23

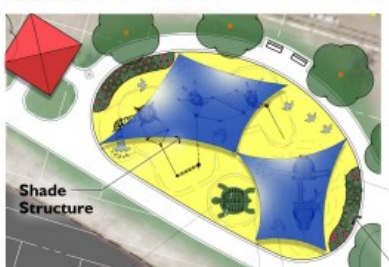

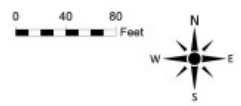

- 1) The new depth of the eastern side will be roughly 2'
- 2) 5,000 cubic yards of sediment will be dredged and kept on site, making the surface area of the lake smaller, while adding more upland area, specifically along the eastern edge.
- 3) The existing island will become part of the upland, creating a larger space for events.
- 4) Another 12" pump will be added to increase the stormwater removal capacity.
- 5) Cost = roughly \$2.5 million
\$2 M from State FY 2023 budget
(thank you Charlie Miller)
Remainder from 2016 revenue bond (CB taxpayer)
